uses of polycarboxylate cement

Precautions for the uses of polycarboxylate cement in winter and summer

In recent years, poly (carboxylic acid water reducing agent, is widely used in building engineering has become the indispensable important part of the construction engineering, however, are poly carboxylic acid use high performance water reducing agent, when use still have a lot of things we need to pay attention to, especially in the summer and winter seasons, below, small make up is poly carboxylic acid water reducing agent summer and winter seasons attention in the use of simple analysis, Hope to be able to provide help to you.

1. In summer, the temperature is too high, in order to slow down the setting time of concrete, it is necessary to add

retarder, which can avoid the loss of concrete to a certain extent.

2, in winter, it is necessary to use polycarboxylate cement, according to the need to use early strength agent, the antifreeze can accelerate time to dismantle, the concrete setting time is slightly ahead of time, if the temperature falls below zero, can add antifreeze, prevent concrete freezing all want to add and subtract water, because water reducing agent can reduce the dosage of the concrete, cement dosage, cost savings.

Q. How can I get the sample?

A: We provide you free sample.

Q. How can you guarantee the goods you offer is qualified?

A: We can provide sample, COA, MSDS and etc to help you insure the quality. And we promise every batch of product will be tested in the factory, and they can only leave the factory after the quality is qualified.
